

# Start saving today with energy wise rewards™

Energy Wise Rewards is Pepco's voluntary peak-energy management program that cycles central air conditioners and heat pumps throughout the District of Columbia during the summer when the electricity demand is high.

The advanced technology makes it easy for you to take more control over your energy use and save money on your energy costs.

**Receive up to \$120 in bill credits your first year!**

Choose the options that best suit your needs.

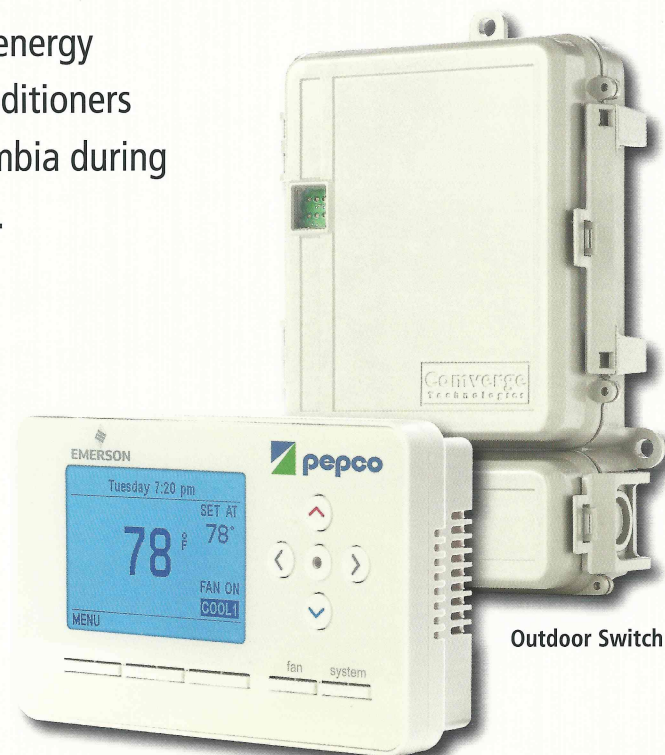

You choose your energy-saving device.

You choose how much your central air conditioner or heat pump is cycled off and on

during conservation periods. With three cycling options to choose from, it's easy to find a fit for your lifestyle. And if you decide to change your choice later on, that's easy too.

There are no hidden fees and the equipment is installed at no charge.

More information is available at **pepco.com/rewards**.

Web-Programmable Thermostat

Outdoor Switch

## Sign up today!

Three ways to enroll make it easy:

- Visit **pepco.com/rewards** and enter promo code **DCRF1214B**
- Complete and mail the enclosed postage-paid reply card
- Call **1-866-353-5798**

## It's easy to participate!

Choose your energy-saving device. Then choose how much money and energy you want to save.

### 1 Choose Your Energy Wise Rewards Device

#### Web-Programmable Thermostat

- Seven-day/four-interval programming for customization to your schedule
- Large, high-resolution LCD display for reading at a glance
- Web programmability that allows remote program changes from anywhere you have Internet access
- Professionally installed at no charge

OR

#### Outdoor Switch

A small device installed outside, near your central A/C unit

- Operates automatically
- You don't have to be home for installation if your central A/C is easily and safely accessible
- Professionally installed at no charge

### 2 Choose Your Participation Level and Savings

#### 50% Cycling

##### Best for your comfort

Your compressor operates 50% of the time that it did in the prior hour. Most participants don't notice the 1- to 3-degree rise in temperature during a typical conservation period.

Get a one-time Installation Credit of **\$30** and Annual Reward Credits of up to **\$30!**

#### 75% Cycling

##### Better for your community

Your compressor operates 25% of the time that it did in the prior hour. This option benefits the environment more, but is not recommended for those with medical conditions. Expect a 2- to 4-degree rise in temperature during a typical conservation period.

Get a one-time Installation Credit of **\$45** and Annual Reward Credits of up to **\$45!**

#### 100% Cycling

##### Best for your budget

Your compressor does not operate for the duration of the conservation period. This option is best for those not home during the day. It is not recommended for those with medical conditions. Expect a 4- to 7-degree rise in temperature during a typical conservation period.

Get a one-time Installation Credit of **\$60** and Annual Reward Credits of up to **\$60!**

### 3 Sign Up

To sign up, just make your selections from Steps 1 and 2, and then you can either visit [pepco.com/rewards](http://pepco.com/rewards), complete and mail the enclosed **postage-paid reply card**, or call **1-866-353-5798**.

## Frequently Asked Questions

#### How does Energy Wise Rewards work?

On selected days from June through October, we'll automatically cycle off and on participating central air conditioners or heat pumps to help balance the region's demand for electricity. These conservation periods occur on Peak Savings Days. In turn, you will receive credits to reduce your electric bill.

#### What is cycling?

When energy demand is approaching a critical point, Energy Wise Rewards devices receive a radio signal that puts A/C compressors into a conservation mode. For example, if participants elect 50% cycling, their compressors will operate half the time they did during the prior hour. The fan will continue to circulate air.

#### How will I receive my Installation Credit and Annual Reward Credits?

You will receive your Installation Credit in full as a bill reduction within two billing cycles of installation of your Energy Wise Rewards device. Annual Reward Credits will appear as a line item reduction off your monthly bills for each device installed, June through October. For example, if you sign up for 50% cycling and your selected device is installed before you are billed in June, you will receive your \$30 Installation Credit as a bill reduction plus \$6 per month in bill credits for June through October.

#### What is a web-programmable thermostat?

The Energy Wise Rewards thermostat is a digital thermostat that allows you to automatically adjust the temperature of your home according to a preset schedule that you choose, either manually or remotely through the web.

During times of peak electricity demand, your Energy Wise Rewards thermostat will receive a radio signal to initiate a conservation period. The radio signal operates on a unique frequency and will not interfere with any other wireless devices in your home.

#### What is an outdoor switch?

The Energy Wise Rewards outdoor switch is a device that is connected near your exterior central A/C unit.

During times of peak electricity demand, your Energy Wise Rewards outdoor switch will receive a radio signal to initiate a conservation period. The radio signal operates on a unique frequency and will not interfere with any other wireless devices in your home.
